Added value from data with Advanced Analytics

Possibilities and benefits

➔ Identification of unknown correlations between the data

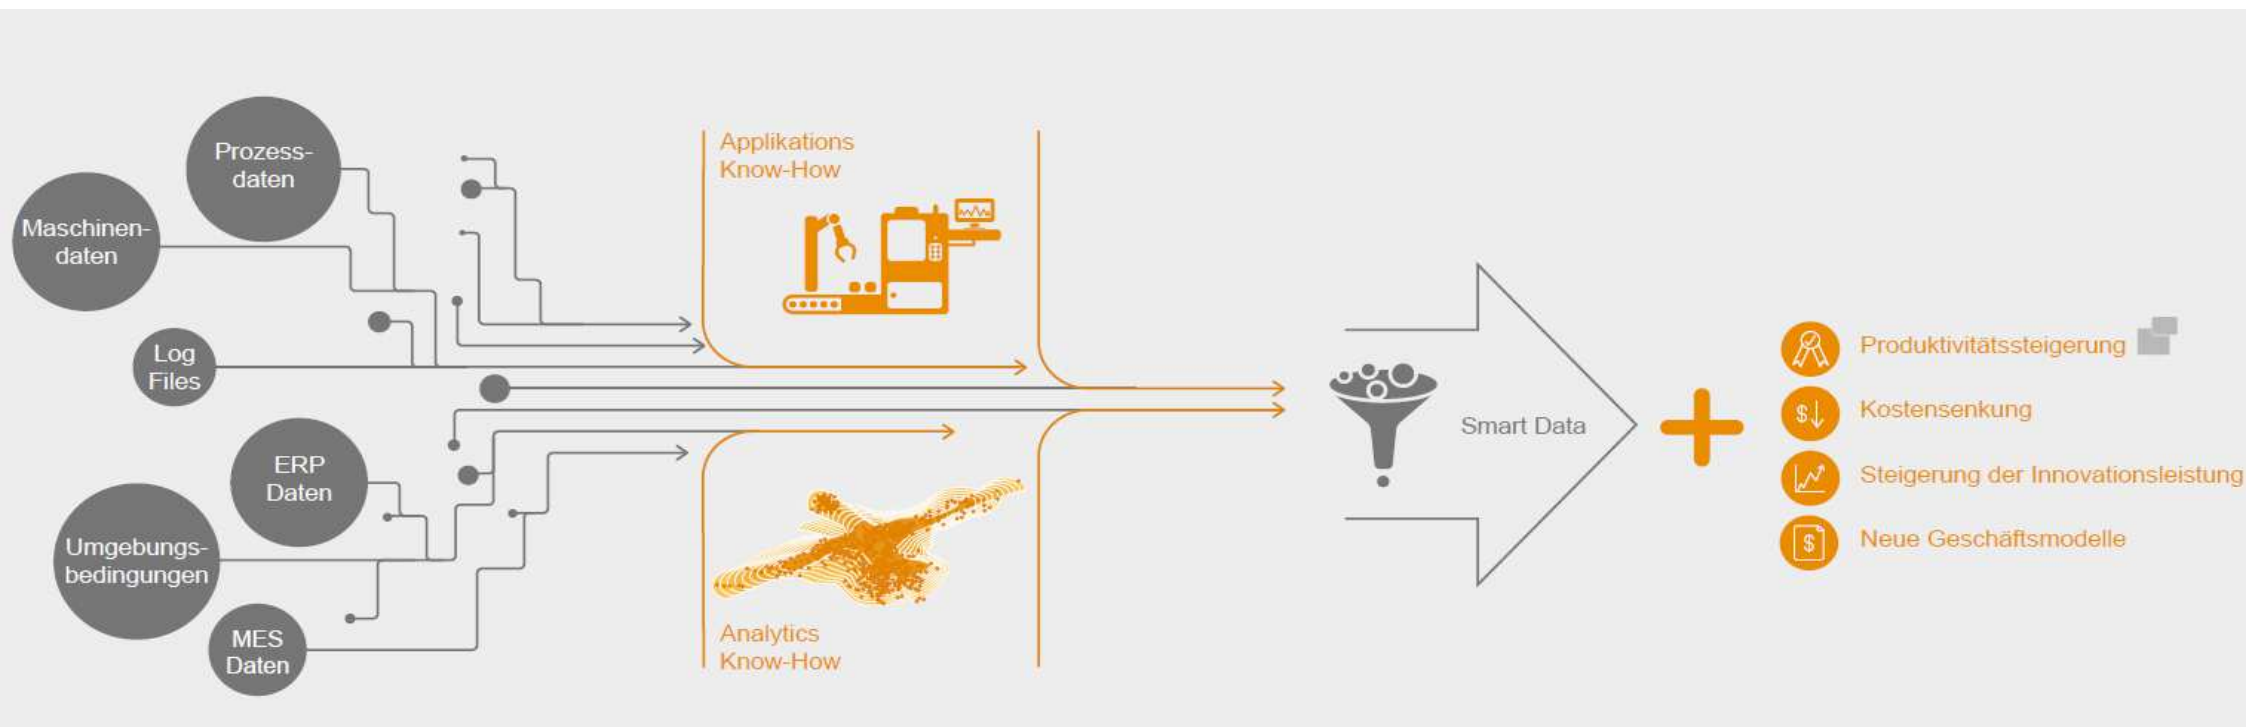

➔ Proactive service processes through failure cause identification before a failure occurs

➔ Process optimization through continuous monitoring of operational processes

➔ Reduction of unscheduled machine downtime and increase of productivity

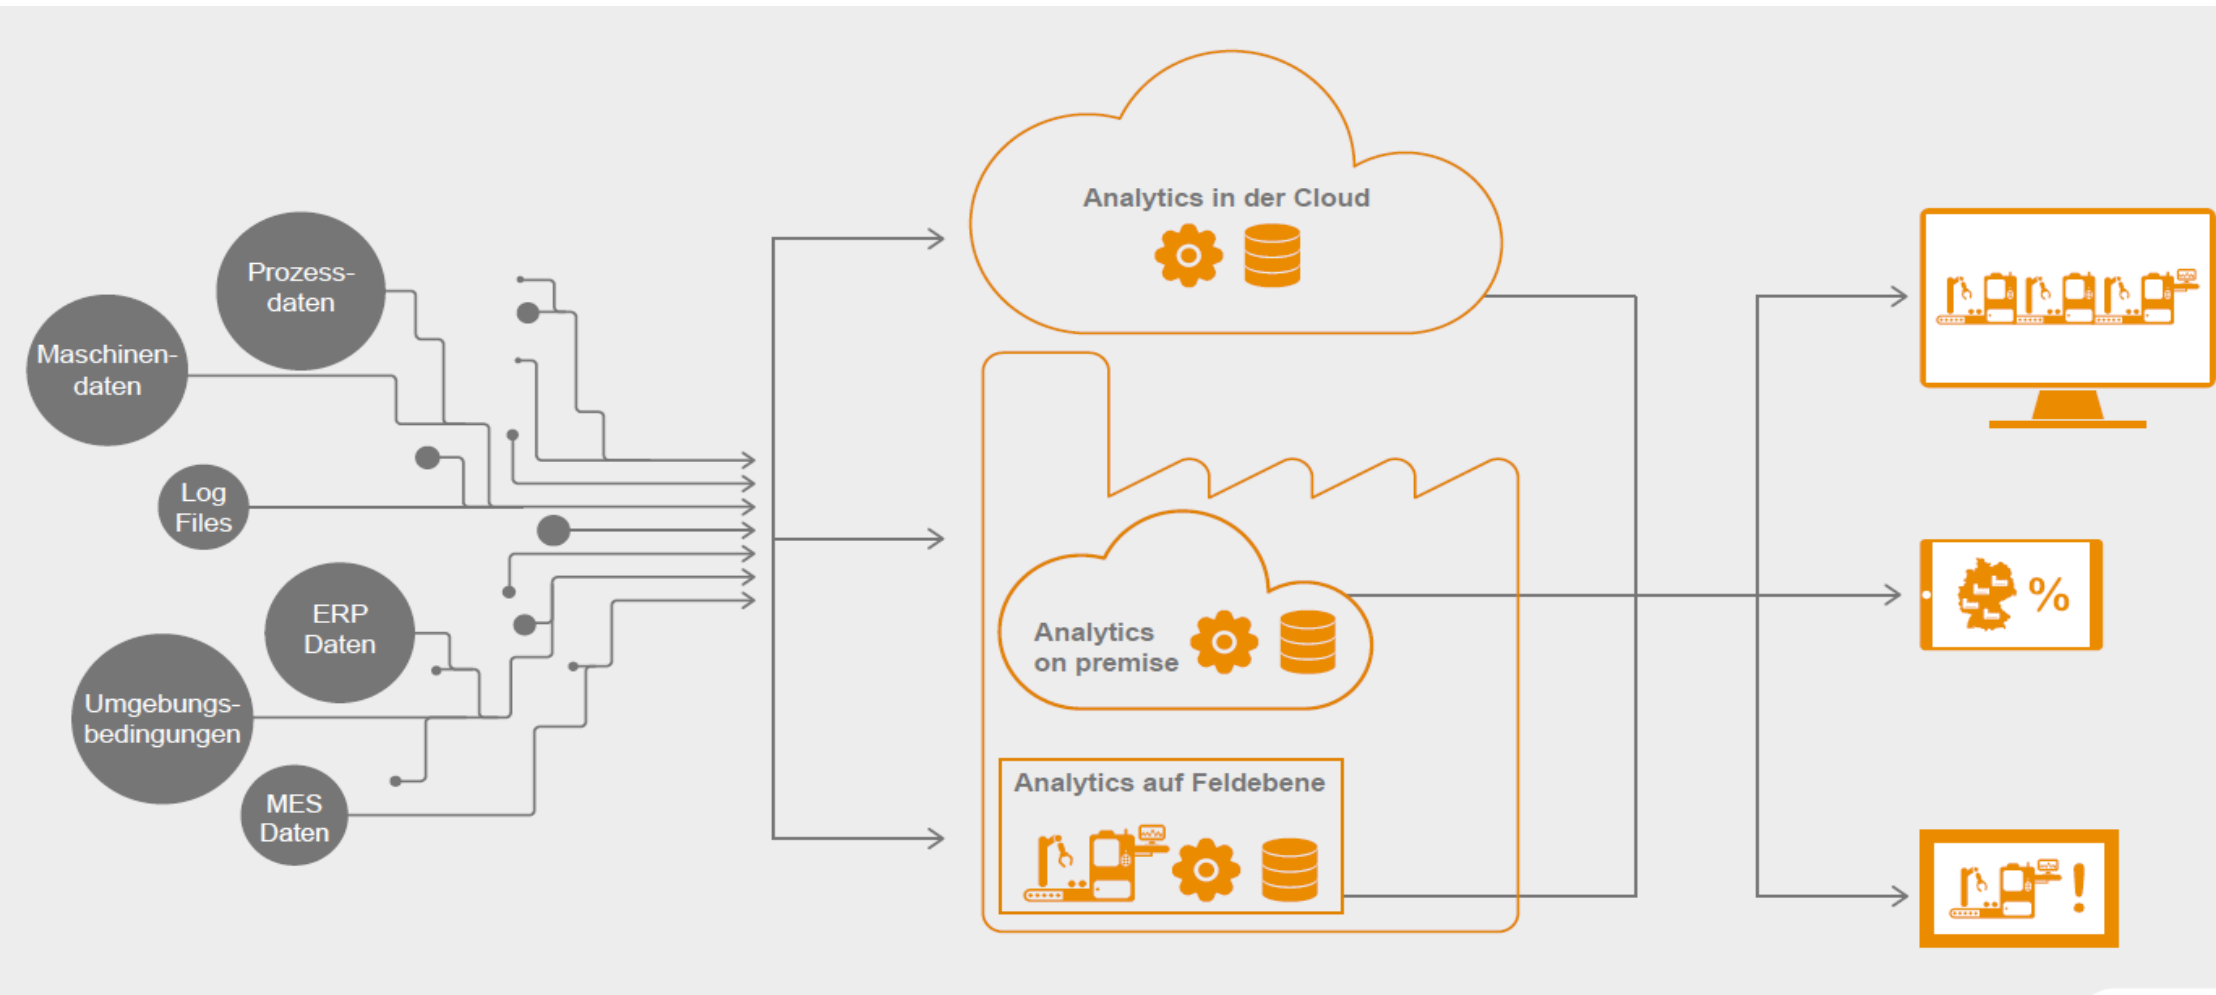

From Big Data to Smart Data

Combining Analytics and Application Know How is the Key

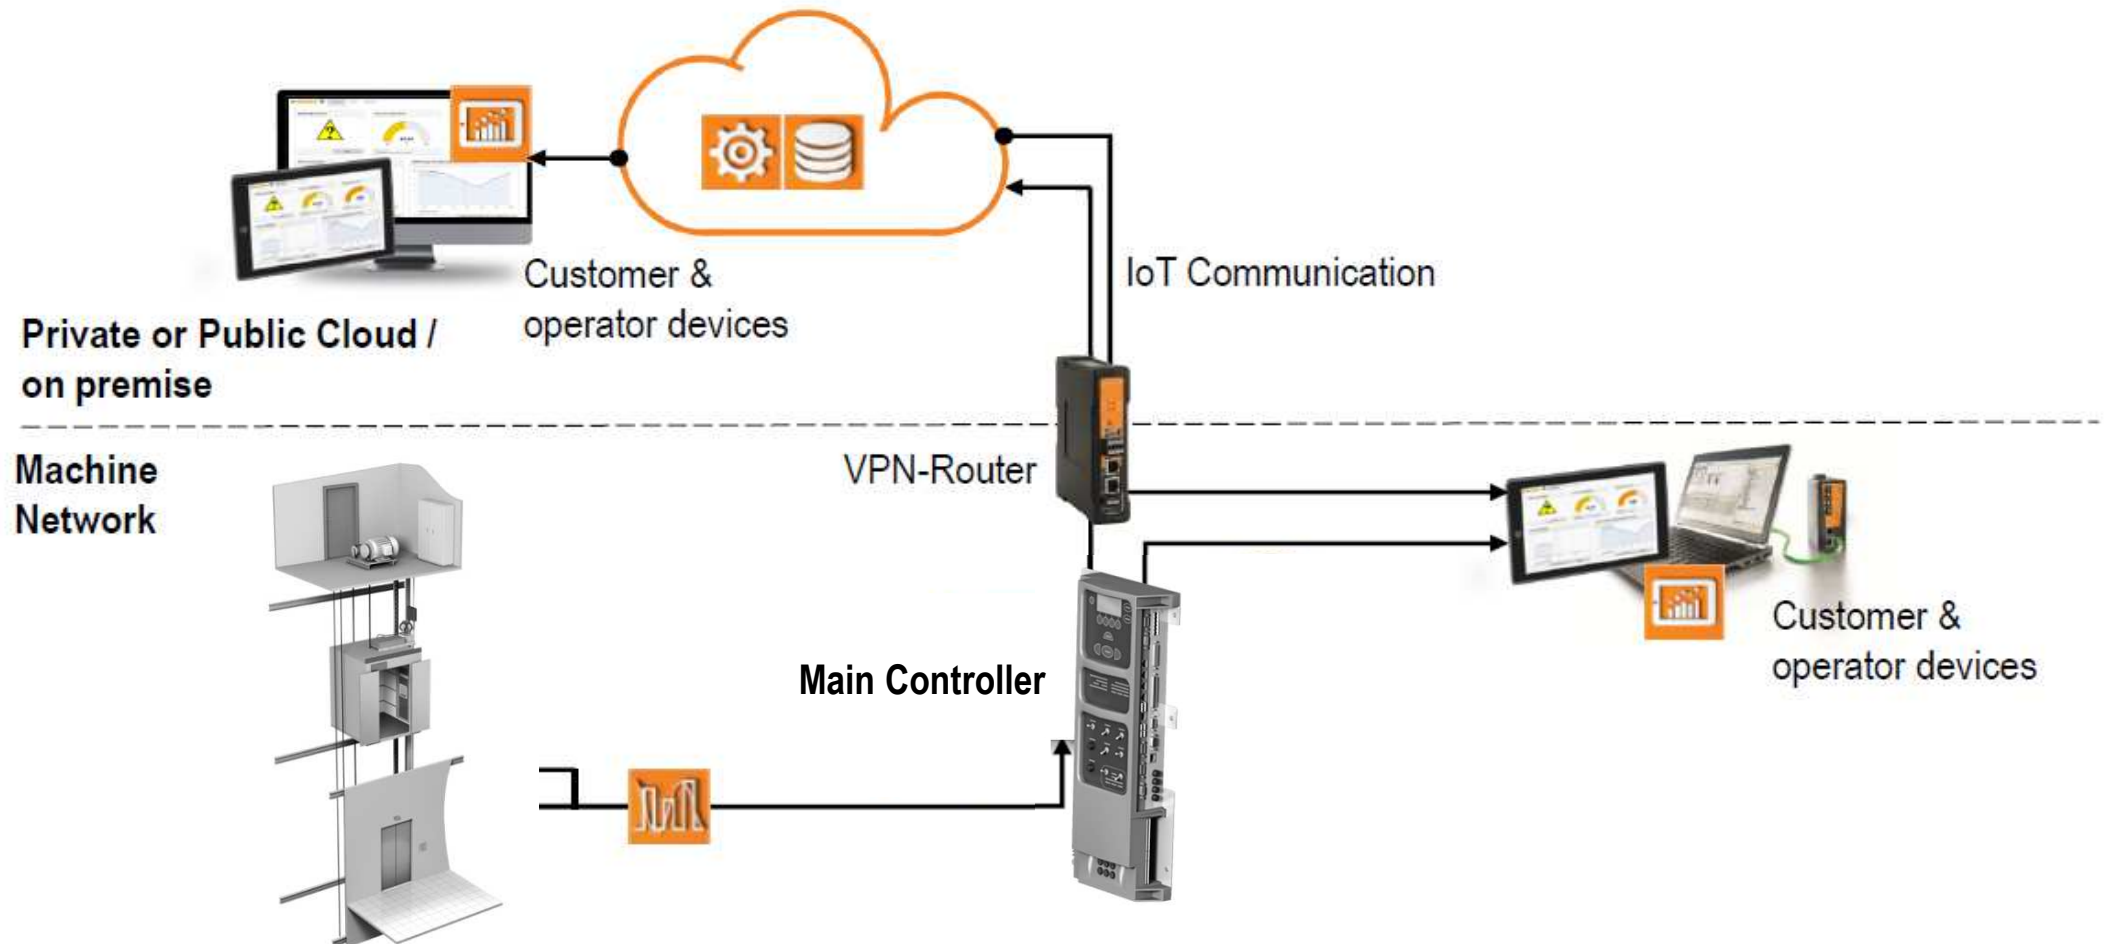

Realise Analytics solution platform independent

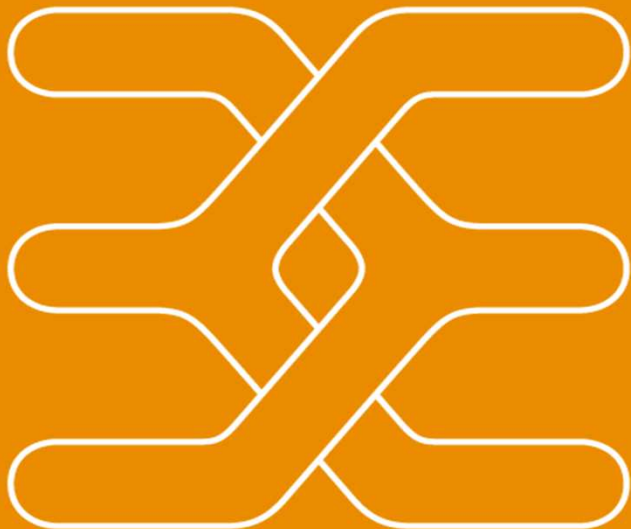

Cloud based, on premise, within machine topology or hybrid

Topology for Advanced Analytics – How it works

 A flexible and scalable combination of analytics building blocks with hardware allows applications specific solutions with high customer value.
